

# Orion API reference

ENG-002 | Engineering | PRODUCT DOCUMENTATION | Version 2.0

| Document control | Value                                                                      |
|------------------|----------------------------------------------------------------------------|
| Access level     | INTERNAL                                                                   |
| Effective date   | 2026-04-01                                                                 |
| Status           | current                                                                    |
| Owner            | Engineering process owner                                                  |
| Scope            | Meridian Works fictional enterprise; all locations unless stated otherwise |

## Purpose and scope

This product documentation describes orion api reference for Meridian Works. It is part of a wholly fictional enterprise knowledge base created for SynapseIQ retrieval experiments. The rules and figures below are invented operational assumptions, not real company rules or professional guidance.

## Key requirements

1. API version v2 uses cursor-based pagination with a maximum page size of 200.
2. The export endpoint returns a job identifier.
3. Requests without workspace scope are rejected.

Authority: effective from 2026-04-01. If a local quick guide disagrees, use the current approved controlling policy and record the discrepancy.

# Orion API reference - 2/6

## Behavior and constraints

API version v2 uses cursor-based pagination with a maximum page size of 200.

The export endpoint returns a job identifier.

## Worked product example

Workspace Cedar Demo uses a synthetic project named Orion Trial 2. An employee requests a report for a selected date range, checks the workspace scope and confirms the resulting job status. Product behavior must be evaluated against the documented version; an archived client example may use a different pagination model.

| Example attribute | Synthetic value                                             |
|-------------------|-------------------------------------------------------------|
| Workspace         | MDEMO-01                                                    |
| Reference         | DOC-ENG-002-02                                              |
| Report status     | queued -> processing -> completed                           |
| Failure handling  | Display a safe explanation and retain the request reference |
| Visibility        | Only the authorized workspace audience receives the output  |

## Troubleshooting

An empty result may reflect filters, workspace scope or missing input data. Confirm those factors before interpreting the result as a system failure. Do not broaden access solely to obtain a result.

## Behavior and constraints

Requests without workspace scope are rejected.

API version v2 uses cursor-based pagination with a maximum page size of 200.

## Worked product example

Workspace Cedar Demo uses a synthetic project named Orion Trial 4. An employee requests a report for a selected date range, checks the workspace scope and confirms the resulting job status. Product behavior must be evaluated against the documented version; an archived client example may use a different pagination model.

| Example attribute | Synthetic value                                             |
|-------------------|-------------------------------------------------------------|
| Workspace         | MDEMO-01                                                    |
| Reference         | DOC-ENG-002-04                                              |
| Report status     | queued -> processing -> completed                           |
| Failure handling  | Display a safe explanation and retain the request reference |
| Visibility        | Only the authorized workspace audience receives the output  |

# Orion API reference - 5/6

## Behavior and constraints

API version v2 uses cursor-based pagination with a maximum page size of 200.

The export endpoint returns a job identifier.

## Worked product example

Workspace Cedar Demo uses a synthetic project named Orion Trial 5. An employee requests a report for a selected date range, checks the workspace scope and confirms the resulting job status. Product behavior must be evaluated against the documented version; an archived client example may use a different pagination model.

| Example attribute | Synthetic value                                             |
|-------------------|-------------------------------------------------------------|
| Workspace         | MDEMO-01                                                    |
